PRODUCT DESIGN | SYSTEMS THINKING | EXECUTION

Title: I design products. Then I build them. **Subtitle:** 18 years. Startup to IPO. Still shipping. **CTAs:** VIEW CASE STUDIES | LINKEDIN

Selected Work

Compliance UX (LIVE)

- Tags: COMPLIANCE | FINTECH | ENTERPRISE
- Description: Led redesign of investor onboarding -- from fax machines to 12-minute digital flows across 20+ jurisdictions. 85% completion rate.
- Process: Research -> Design -> Systems -> Ship

Katipult DealFlow (LIVE)

- Tags: PRODUCT DESIGN | FINTECH | IPO
- Description: Co-founded in 2008. Led product design from 3 people to TSX-V IPO. Deal management, portfolio tracking, and investor relations across web and mobile. $2B+ processed.
- Process: Strategy -> UX/UI -> Design System -> IPO

AKMSecure (LIVE)

- Tags: BRAND | WEB | HUBSPOT
- Description: Brand identity, responsive website, and CMS integration for a cybersecurity startup.
- Process: Research -> Design -> Build -> Ship

MultiPaste (GHOST)

- Tags: FIGMA PLUGIN | PRODUCTIVITY | FREE
- Description: Figma plugin that distributes text across layers. Paste a list, each line maps to a layer. Loop, reverse, preview, undo.
- Status: COMING SOON

Docs to Design (GHOST)

- Tags: FIGMA PLUGIN | AUTOMATION | SIDE PROJECT
- Description: Figma plugin that converts Word documents into styled designs.
- Status: COMING SOON

IsoBlock (GHOST)

- Tags: FIGMA PLUGIN | ISOMETRIC | SIDE PROJECT
- Description: Isometric shape creation plugin. 15 primitives, 5 surface presets.
- Status: COMING SOON

RelationSync (GHOST)

- Tags: MOBILE APP | PRODUCT DESIGN | COLLABORATION

- Description: Voice-first journaling app. 35 screens, 19 components, AI summaries.
- Status: COMING SOON

MyPick.io (GHOST)

- Tags: WEB APP | RANDOMIZER | SIDE PROJECT
- Description: Pixel car race randomizer. 4 terrains, mechanical failures, zero dependencies.
- Status: COMING SOON

About

Title: About **Role:** Senior Product Designer

Co-founder and lead product designer at Katipult, where we grew from 3 people to a TSX-listed public company. I designed the full investor platform -- onboarding, compliance workflows, and the design system used across the product org.

Since Katipult, I have consulted on product design for a design tools studio and delivered a full rebrand and web build for an industrial cybersecurity client.

I work across UX, UI, brand, and front-end development. 18 years of shipping products.

Stats:

- 18 YEARS
- $2B+ PROCESSED
- TSX-V LISTED
- 20+ JURISDICTIONS

Specializations

Fintech UX: KYC/AML onboarding, investor dashboards, deal flow management. 20+ jurisdictions, white-label architecture, real regulatory compliance. **Design Systems:** Component libraries, theming layers, design tokens. Built systems that power 20+ white-label deployments for enterprise clients. **Product Strategy:** Spec to ship. Research, wireframes, prototypes, production. Led product design from 3-person startup to public company.

Contact

Title: Looking for a senior role where product thinking, execution, and AI fluency overlap. **Location:** Calgary, AB + Remote **CTAs:** GET IN TOUCH | VIEW LINKEDIN

Meta

Description: Co-founded a fintech company that went from 3 people to a TSX-V IPO. 18 years shipping products across fintech, compliance, and enterprise software. **OG Description:** Co-founded a fintech company that went from 3 people to a TSX-V IPO. 18 years shipping products across fintech, compliance, and enterprise software.

Hero

Label Bar: Katipult | Product Design | Private Capital **Title:** Katipult DealFlow Platform **Subtitle:** Co-founded in 2008. Led product design across every screen the platform shipped for 15 years. Grew from 3 people to 49+, went public on the TSX Venture Exchange. **Stats:**

- 49+ -- Employees at peak
- IPO -- Public company (TSX-V)
- 20+ -- White-label deployments
- 15 yrs -- As design lead

Platform Overview

Label Bar: Subject | Platform | Private Capital

Katipult is the infrastructure behind private capital markets. Investment dealers like Canaccord and TMX use it to run the full deal lifecycle: onboarding investors, managing commitments, closing deals, and staying compliant.

Co-founded as JOI Media in 2008. Led every design decision from day one: screens, flows, and components across the full platform. When you're the design lead at a startup, you own the whole surface.

Research Framework

Label Bar: Process | Research | Framework

Private capital infrastructure has no obvious design precedent. Before touching a single screen, I mapped the business problem to market reality. Each design decision traces back to a real constraint.

Metric	Business Problem	User Need
20+ white-label deployments across 6 markets	A single confusing screen multiplies across every client's investor base	Design system consistent enough to white-label but flexible enough each dealer feels it's built for them
321 target accounts across equity, debt & lending	Market fragmented, each asset class on different tools	One platform for all deal types, without retraining staff
6 markets, 20+ regulatory jurisdictions	Every country has different securities law	White-label that configures compliance rules per deployment
Deployed for: SVX, Markette, Canaccord, Raymond James, Cormark, Red Cloud	Niche expertise hard to communicate without proof	Case studies in their asset class showing platform deployed
65% avg KYC drop-off without guided onboarding	Poor onboarding drives investors away	Step-by-step KYC with plain-language explanations

The Question (North Star)

Label Bar: Process | North Star | Strategy **How might we...**

Design white-label private capital infrastructure flexible enough to serve 3 asset classes, 6 markets, and 20+ regulatory jurisdictions, so that any investment dealer can deploy a fully compliant, branded investor experience without custom development?

> This question shaped every design decision from 2014 onward. Not "what looks good" but "what makes a dealer confident enough to sign a $250K contract and trust us with their investors?"

Competitor Analysis

Label Bar: Process | Competitor Analysis | Market

No direct 1:1 competitor existed. Studied adjacent platforms to identify gaps.

- **Carta** (Equity Management, USA) -- Gap: Equity-only. No debt, lending, or KYC. Clean cap table UI was benchmark for information density.
- **AngelList** (Venture Capital, USA) -- Gap: Venture-stage only. No regulatory compliance outside US, no white-label. Confirmed gap: no platform served multi-jurisdiction regulated dealers.
- **Persona / Onfido** (KYC, Global) -- Opportunity: Best-in-class step-by-step ID verification. Progressive disclosure informed Katipult's KYC flow design.
- **SVX** (Impact Investing, Canada) -- Opportunity: Early Katipult client. White-label on our infrastructure. Proved model before scaling to Canaccord, Raymond James, Cormark.

Results & Impact

Started in a basement. Led product design from day one. 15 years later: a public company with infrastructure running for some of Canada's largest investment dealers.

- **IPO** Public Company -- Listed on TSX Venture Exchange. EY Entrepreneur of the Year finalist 2017.
- **20+** White-Label Deployments -- Platform running for Canaccord, Raymond James, Cormark, Red Cloud, and more.
- **6** Markets -- Canada, USA, UK, Australia, Hong Kong, Singapore. One design system across all.

CTA

Katipult DealFlow Platform

Design Co-Founder | 2008-2023 | JOI Media -> Katipult -> IPO

Hero

Label Bar: Katipult | Compliance UX | Fintech **Title:** Compliance UX for Private Capital Markets **Subtitle:** Led redesign of how investors get approved in regulated markets. What used to take days of paperwork and fax machines now takes minutes, across 20+ jurisdictions. **Stats:**

- < 12 min -- Average onboarding time
- 20+ -- Jurisdictions supported
- 85% -- Completion rate

Business Context

Label Bar: Katipult | Business Context | Fintech

Katipult powers private capital markets infrastructure. Investment dealers, fund managers, and crowdfunding portals rely on it for investor onboarding, deal flow, and compliance. The platform handles real money, real regulations, and real consequences for getting it wrong.

Highlight: The goal: satisfy regulators in 20+ jurisdictions while keeping investors from abandoning the process. **Project Goals:**

- Design KYC/AML-compliant onboarding flows
- Support accreditation across 20+ jurisdictions
- Reduce drop-off during document verification
- White-label ready for enterprise clients

Problem Statement

Label Bar: Challenge | Problem | Fintech

Investors were faxing documents. Compliance teams were drowning in manual reviews. The onboarding experience was scattered across email, physical mail, and phone calls. Industry research showed the severity of the problem.

Metrics:

- 65% -- KYC drop-off rate without guided onboarding (Industry benchmark, Persona / Onfido, pre-2017)
- 3-5 days -- Manual KYC verification time (Industry baseline for manual document review)

Pain Points:

- Manual document collection via email and fax
- No visibility into onboarding progress
- Compliance teams overwhelmed with manual reviews

Design Approach

Label Bar: Method | Approach | Fintech

Spent weeks alongside compliance officers and real investors mapping the regulatory landscape. 20+ jurisdictions, each with different requirements. The approach: progressive disclosure. Show investors only what they need, when they need it. Hide the complexity without hiding the compliance.

Steps:

1. Regulatory Mapping -- Mapped KYC/AML requirements across 20+ jurisdictions
2. Flow Design -- Progressive disclosure for complex compliance steps
3. Validation -- Tested with real investors and compliance officers

User Flow

Label Bar: Process | User Flow | Fintech

Five core steps, but no two investors see the same flow. The system adapts per jurisdiction. A Canadian accredited investor skips steps that a US retail investor must complete. The design challenge was making a branching flow feel linear.

5 core steps | 20+ jurisdiction variants

Flow: Sign Up -> Identity Verification -> Accreditation -> Document Upload -> Approved

KSign (Electronic Signature Module)

Label Bar: Feature | KSign | E-Signatures

When investors commit capital, they need to sign. KSign is the signature module designed specifically for that step. Subscription agreements, regulatory disclosures, accreditation documents. Compliant across 20 jurisdictions, part of the platform that went public on the TSX Venture Exchange.

- Full signature flow for investment documents
- Regulatory compliance integration across 20 jurisdictions
- Part of design system powering 20+ white-label deployments
- Part of platform deployed across 20+ white-label instances globally

Results & Impact

The design goal: make a regulated, multi-jurisdictional process feel like a consumer product. Minutes instead of days. Guided instead of abandoned.

- **85%** Completion Rate -- Guided, step-by-step onboarding. Investors complete KYC without abandoning mid-flow.
- **< 12 min** Average Onboarding -- Down from 45 minutes. Streamlined flow with inline validation and jurisdiction-specific requirements.
- **20+** Jurisdictions -- Single flow adapts to regulatory requirements per region. No duplicate builds.
- **20+** White-Label Deployments -- Same compliance flow running across every client instance, each branded differently.

CTA

Compliance UX for Private Capital Markets

Katipult | Co-Founder & Lead Product Designer | 2014-2023

Hero

Label Bar: AKMSecure | Brand & Web | Cybersecurity **Title:** AKMSecure **Subtitle:** A cybersecurity startup needed to look as secure as their product. Owned design and development from brand to deployment. Brand, website, print, CMS. **Deliverables:**

- Full Brand Identity system from scratch
- Website Design & development
- HubSpot CMS migration

Brand Philosophy

Security starts with identity. Brand, trust, and credibility before code.

Typography & Color

Label Bar: Brand | Typography & Color

Dark palette, minimal color. In cybersecurity, restraint signals competence. One accent color (deep red) for warnings and CTAs. Everything else stays neutral.

Primary Typeface: Inter

- 400 Regular -- Body text, standard content
- 500 Medium -- Labels and navigation
- 600 Semi-Bold -- Section headings, UI labels
- 700 Bold -- Page titles, hero text

Color Palette:

- #0B0B0B
- #1A1A1A
- #2B2B2B
- #6B6B6B
- #ADADAD
- #F2F2F2
- #991b1b (accent red)
- #3D3D3D
- #8B8B8B

Website

Label Bar: Deliverable | Website | Development

Designed and built from scratch. No template. The site needed to communicate technical credibility to enterprise buyers without looking like every other security vendor. Wrote the copy, designed the pages, and handled the HubSpot CMS migration.

Print Collateral

Label Bar: Deliverable | Print | Materials

Physical materials for trade shows and sales meetings. Same brand system, adapted for print. The tear sheet became their primary leave-behind at conferences.

- Tear Sheet
- Business Card
- Letterhead

CTA

AKMSecure

Brand & Web Designer | Solo (design & dev) | 2025

Hero

Label Bar: MultiPaste | Figma Plugin | MZM Labs **Title:** MultiPaste **Subtitle:** A Figma plugin that distributes text data across multiple selected text layers. Paste a list from a spreadsheet, each line maps to a layer. Loop, reverse, preview, and undo. Built because I use this workflow every day and wanted it done right. **Stats:**

- 5 -- Delimiters
- 1-Click -- Undo
- 0 -- Dependencies
- Free -- Forever

Context

Label Bar: CONTEXT / THE PROBLEM **Title:** THE PROBLEM **Subtitle:** Populating text layers is tedious

Every time you design a table, a list, a set of cards, or any repeating UI pattern, you end up copy-pasting text one layer at a time. Select layer, paste, select next layer, paste. 50 names into 50 cards means 100 clicks minimum.

Existing plugins solve this partially but lack preview, undo, and delimiter options. I used Many Paster daily and wanted a version that matched MZM Labs quality standards with the features I was missing.

> I built MultiPaste to eliminate the most tedious part of populating realistic designs.

Meta:

- ROLE: Solo Designer & Developer
- STACK: TypeScript | Figma Plugin API | esbuild
- STATUS: Production v0.1.0
- YEAR: 2026

How It Works

Label Bar: HOW IT WORKS / THE FLOW **Title:** THREE STEPS

1. **Select text layers** -- Click the layers you want to populate. Nested layers in frames, groups, and components are detected automatically.
2. **Paste your data** -- Drop a list from Excel, a spreadsheet, or type it directly. Choose newline, comma, or tab as delimiter.
3. **Preview and paste** -- See exactly which line maps to which layer before committing. One click to paste, one click to undo.

Features

Label Bar: FEATURES / WHAT I BUILT **Title:** FEATURE SET

Core

- **Multi-line paste** -- Each line maps to a text layer in selection order
- **Delimiter options** -- Newline, comma, or tab splitting
- **Loop mode** -- Cycle lines when you have more layers than data
- **Reverse order** -- Paste in reverse selection order
- **Trim whitespace** -- Auto-clean leading/trailing spaces
- **Skip empty lines** -- Filter blank entries automatically

Enhanced

- **Live preview** -- Line-to-layer mapping table before you commit
- **One-click undo** -- Restore original text instantly
- **Copy from selection** -- Read existing text back into the plugin

- **Mixed font support** -- Handles text nodes with multiple font styles
- **Deep selection walk** -- Finds text layers nested in frames, groups, and component instances

Plugin UI

Label Bar: INTERFACE / PLUGIN PANEL **Title:** PLUGIN UI **Subtitle:** 320x460, MZM Labs dark theme

Selection banner with real-time count. Monospace textarea for data input. Inline options row with delimiter dropdown and toggle switches. Collapsible preview section showing numbered line-to-layer mapping. Primary paste button with disabled/enabled states. Success and error banners with auto-dismiss. Rose accent throughout.

States:

1. Empty -- No selection, muted controls
2. Active -- Layers selected, data entered, paste enabled
3. Preview -- Line-to-layer mapping visible
4. Post-paste -- Success banner, undo active

Technical

Label Bar: TECHNICAL / UNDER THE HOOD **Title:** HOW IT WORKS INSIDE

- **Font loading** -- Async font discovery per text node. Mixed-font nodes require per-character font enumeration before any text write.
- **Iterative tree walk** -- Stack-based traversal avoids recursion depth limits on deeply nested component instances.
- **Message protocol** -- Discriminated union types for all code-to-UI and UI-to-code messages. Type-safe IPC.
- **Build** -- esbuild bundles TypeScript to ES2017. JS inlined into HTML for Figma's single-file plugin requirement. 4.7KB code + 7.2KB UI.

Designed and built by Pheak Meas | MZM Labs Inc.

Hero

Label Bar: DESIGN ENGINE / FIGMA PLUGIN / MZM LABS **Title:** Turning Word Documents into Figma Designs **Subtitle:** A Figma plugin that converts .docx files into fully editable designs. Upload a Word document, get professionally structured Figma pages in seconds. **Stats:**

- Seconds -- Conversion time
- < 10KB -- Plugin bundle size
- 7 -- Auto-generated text styles
- 5 -- Guided wizard steps

Challenge

Label Bar: CHALLENGE **Title:** THE CHALLENGE

The workflow is universal and universally painful. A client sends a Word document. The designer opens it and begins manual labor: copy heading, paste into Figma, style it. Copy body text, paste, style it. Recreate the table structure from scratch. Repeat for 30 pages.

> No existing Figma plugin solved the full document-to-design pipeline.

Insight

Label Bar: INSIGHT **Title:** THREE DISCOVERIES

Discovery 01: One-Click Beats Configurability

Plugins with extensive configuration had low adoption. Designers want to drop a file and get a result.

Discovery 02: Plugin UI Is Its Own Discipline

480x600px is not a web page, not a mobile screen. It demands its own design language.

Discovery 03: Dual-Layer Parsing Absorbs Chaos

A single parsing strategy cannot handle real-world .docx variance. Two layers compensate for each other.

The Wizard

Label Bar: WORKFLOW / 5-STEP WIZARD **Title:** THE WIZARD

Five steps from Word document to styled Figma design. Each step handles one clear decision. No configuration screens, no settings panels. Just forward momentum.

1. **Upload** -- Drop a .docx file. The parser reads headings, body text, lists, and tables in one pass.
2. **Preview** -- See your document structure before any conversion. Headings, paragraphs, and lists mapped to Figma layers.
3. **Style** -- Pick a text style preset. Seven auto-generated styles map to your document hierarchy.
4. **Generate** -- One click. Text layers, auto-layout frames, and styled components appear on your Figma canvas.
5. **Done** -- Your document is now a Figma design. Edit, restyle, or hand off. The original structure is preserved.

Compact Pro (Design System)

Label Bar: DESIGN SYSTEM / PLUGIN VIEWPORT **Title:** COMPACT PRO **Subtitle:** Designing for 480 x 600px

Figma plugin panels are 300-480px wide and 600px tall. Every pixel matters. I built a complete design system for this constraint: compact inputs, stacked controls, icon-only toggles, and a type scale that stays readable at 11px.

> The constraint became the product's personality. Dense, precise, zero wasted space.

Brand Identity

Label Bar: BRAND / IDENTITY **Title:** BRAND IDENTITY

The copper-to-teal gradient is the brand story. Copper represents the raw input. A Word document. Unformatted, unstructured. Teal represents the output. A styled Figma design. Clean, structured, ready to ship. The gradient connects them. Transformation in a single visual.

Color Palette:

- Copper #D4956A
- Teal #2A8F8A
- Seafoam #5EDDB8
- Dark #0C0C0C
- Surface #222222

Results & Impact

Label Bar: OUTCOMES / METRICS **Title:** RESULTS & IMPACT

From hours of manual formatting to seconds of automated conversion. The plugin handles the tedious work so designers can focus on design.

- **Seconds** Conversion Time -- What used to take hours of manual formatting now happens in seconds.
- **< 10KB** Bundle Size -- Lean plugin. No bloated dependencies. Fast install, instant load.
- **7** Text Styles -- Auto-generated from document hierarchy. Heading 1 through body text.
- **0** Crashes -- Zero crashes on 50+ documents tested. Graceful error handling throughout.

CTA

Title: Docs to Design

MZM Labs | Solo Designer & Developer | 2025-2026

Links: Figma Community | docstodesign.com

Designed and built by Pheak Meas | MZM Labs Inc.

Hero

Label Bar: IsoBlock | Figma Plugin | MZM Labs **Title:** IsoBlock **Subtitle:** A Figma plugin for creating isometric shapes. 15 shape primitives, 5 surface presets, elliptical shadows, and a keyboard-driven workflow. One-click isometric design without leaving Figma. **Stats:**

- 15 -- Shape Primitives
- 5 -- Surface Presets
- 30+ -- Keyboard Shortcuts
- 0 -- Dependencies

Context

Label Bar: CONTEXT / THE PROBLEM **Title:** THE PROBLEM **Subtitle:** Why isometric is hard in Figma

Creating isometric shapes in Figma means manual rotation, skewing, and alignment for every single element. Designers resort to importing pre-made SVGs or spending hours on geometric calculations. There was no native way to create, customize, and iterate on isometric designs directly in Figma.

> IsoBlock turns isometric design from a math problem into a creative tool.

Shape Primitives

Label Bar: SHAPES / 15 PRIMITIVES **Title:** SHAPE PRIMITIVES

15 shapes organized in three categories. Basic primitives for everyday use, structural shapes for architecture and diagrams, and diagram shapes for flowcharts and presentations. Each rendered with the three-tone isometric color system.

Basic (6 Primitives)

Cube, Cylinder, Pyramid, Diamond, Stairs, Ramp

Structural (5 Shapes)

Wall, Floor, L-Shape, T-Shape, Corner

Diagram (4 Shapes)

Arrow, Connector, Label, Platform

Surface Presets

Label Bar: RENDERING / 5 PRESETS **Title:** SURFACE PRESETS

Five rendering styles applied to any shape. Each preset controls how light interacts with the three isometric faces, creating distinct visual treatments from a single shape.

1. **Flat** -- Solid colors, no gradients
2. **Matte** -- Subtle gradients per face
3. **Glossy** -- Strong highlights, reflections
4. **Metallic** -- Chrome-like reflective faces
5. **Pastel** -- Soft, muted color palette

Plugin UI

Label Bar: INTERFACE / PLUGIN PANEL **Title:** PLUGIN UI **Subtitle:** Vertical sidebar, 300px wide

Shape selector with icon grid. Color picker with hex input and HSL sliders. Shadow controls with angle and blur. Keyboard shortcut indicators on every action. Dark theme matching Figma's native UI.

Label Bar: RelationSync | Mobile App | Product Design **Title:** RelationSync **Subtitle:** A mobile app for capturing and reflecting on relationship memories. Voice-first journaling with AI summaries, calendar views, and personal insights. **Stats:**

- 35 -- Screens
- 19 -- Components
- 7 -- Onboarding Screens

Context

Label Bar: Context | Product | Mobile App **Title:** About the Product

RelationSync is a mobile app for capturing and reflecting on relationship memories. Built with a friend as a personal project. Voice-first journaling powered by AI summaries, with calendar views and personal insights.

Role: I handle all design and frontend development. 35 screens designed from scratch, 19 reusable components, and a 7-screen interactive onboarding flow.

Statement 1

> Remember what matters.

-- the philosophy behind every design decision

Voice Journal (Core Feature)

Label Bar: Feature | Voice Journal | Core **Title:** VOICE-FIRST JOURNALING

Tap and talk. RelationSync captures voice entries and uses AI to generate summaries, extract key moments, and tag relationships automatically.

Design Philosophy

> Designing for intimacy, not engagement metrics.

No likes, no followers, no feed algorithm. Just you and the people you care about.

Onboarding Flow

Title: ONBOARDING FLOW

7-screen interactive onboarding guiding new users through setup, permissions, and their first memory capture.

Key Screens

Title: KEY SCREENS

Core screens designed in Pencil. 35 total screens covering onboarding, journaling, calendar, insights, and settings.

Visual Identity

Label Bar: Brand | Visual Identity **Title:** COLOR & TYPOGRAPHY **Color Palette:** Purple-charcoal direction **Typography:**

- Inter -- Primary typeface for all UI elements, headings, body text, and navigation. Weights 400-700.

Design System

Title: DESIGN SYSTEM

A complete component library built in Pencil. Every element tokenized for consistency across 35 screens.

- 19 -- Reusable Components
- 31 -- Design Variables
- 8px -- Spacing Grid
- 2 -- Theme Modes

CTA

Title: Want to see more?

RelationSync is an ongoing personal project. Full interactive prototype and component library designed in Pencil.

Hero

Label Bar: 01 -- HERO **Title:** MyPick.io **Subtitle:** Random number generators work. They're also boring. MyPick.io turns list shuffling into a pixel car race with 21 sound effects, mechanical failures that create real drama, and a dynamic camera that builds tension as cars approach the finish line. Zero dependencies, cryptographically fair. **Stats:**

- 21 -- Sound Effects
- 0 -- Dependencies
- 8 -- Car Colors
- Crypto -- Secure

Context

Label Bar: 02 -- CONTEXT **Title:** THE PROBLEM WITH RANDOMIZERS

Every group decision has a dead moment. Someone pulls out their phone, opens a random number generator, taps a button, reads a number. Nobody watches. Nobody remembers.

I wanted that moment to be the best part. MyPick.io turns it into a pixel car race with mechanical failures, a dynamic camera, and 21 sound effects across 5 categories. Cars don't get eliminated. They break down, slow down, then recover with an adrenaline boost. Built from scratch. Zero dependencies. I wanted to own every pixel.

Meta:
